

CREDIT.

WHERE CREDIT'S DUE

From Carbon to Biodiversity

The project

FOUNDATION CREAT PLANS CONSERVING AND EXPANDING NATURAL HABITATS

Project value is greater than carbon alone.

Biodiversity credits diversify the current business model.

UNDP Global Biodiversity Framework

Verra

Plan Vivo

Gold Standard

Verifiers are still developing biodiversity frameworks.

We **bundled variables** that our client can measure and are part of leading methodologies.

Carbon stock	
Earth observation	In situ
Local partners	Allometry

Biodiversity stock

Ecosystem integrity Historical use

Species inventory Field experiments

Carbon credits are linked to biodiversity and the ecosystem.

This creates opportunity in biomes that are not high-value through carbon.

Investor demand is high.

The biggest bottle neck is connecting with landowners.

The Execution

Conservation targets

Toolkit for local

partners

Opportunity mapping

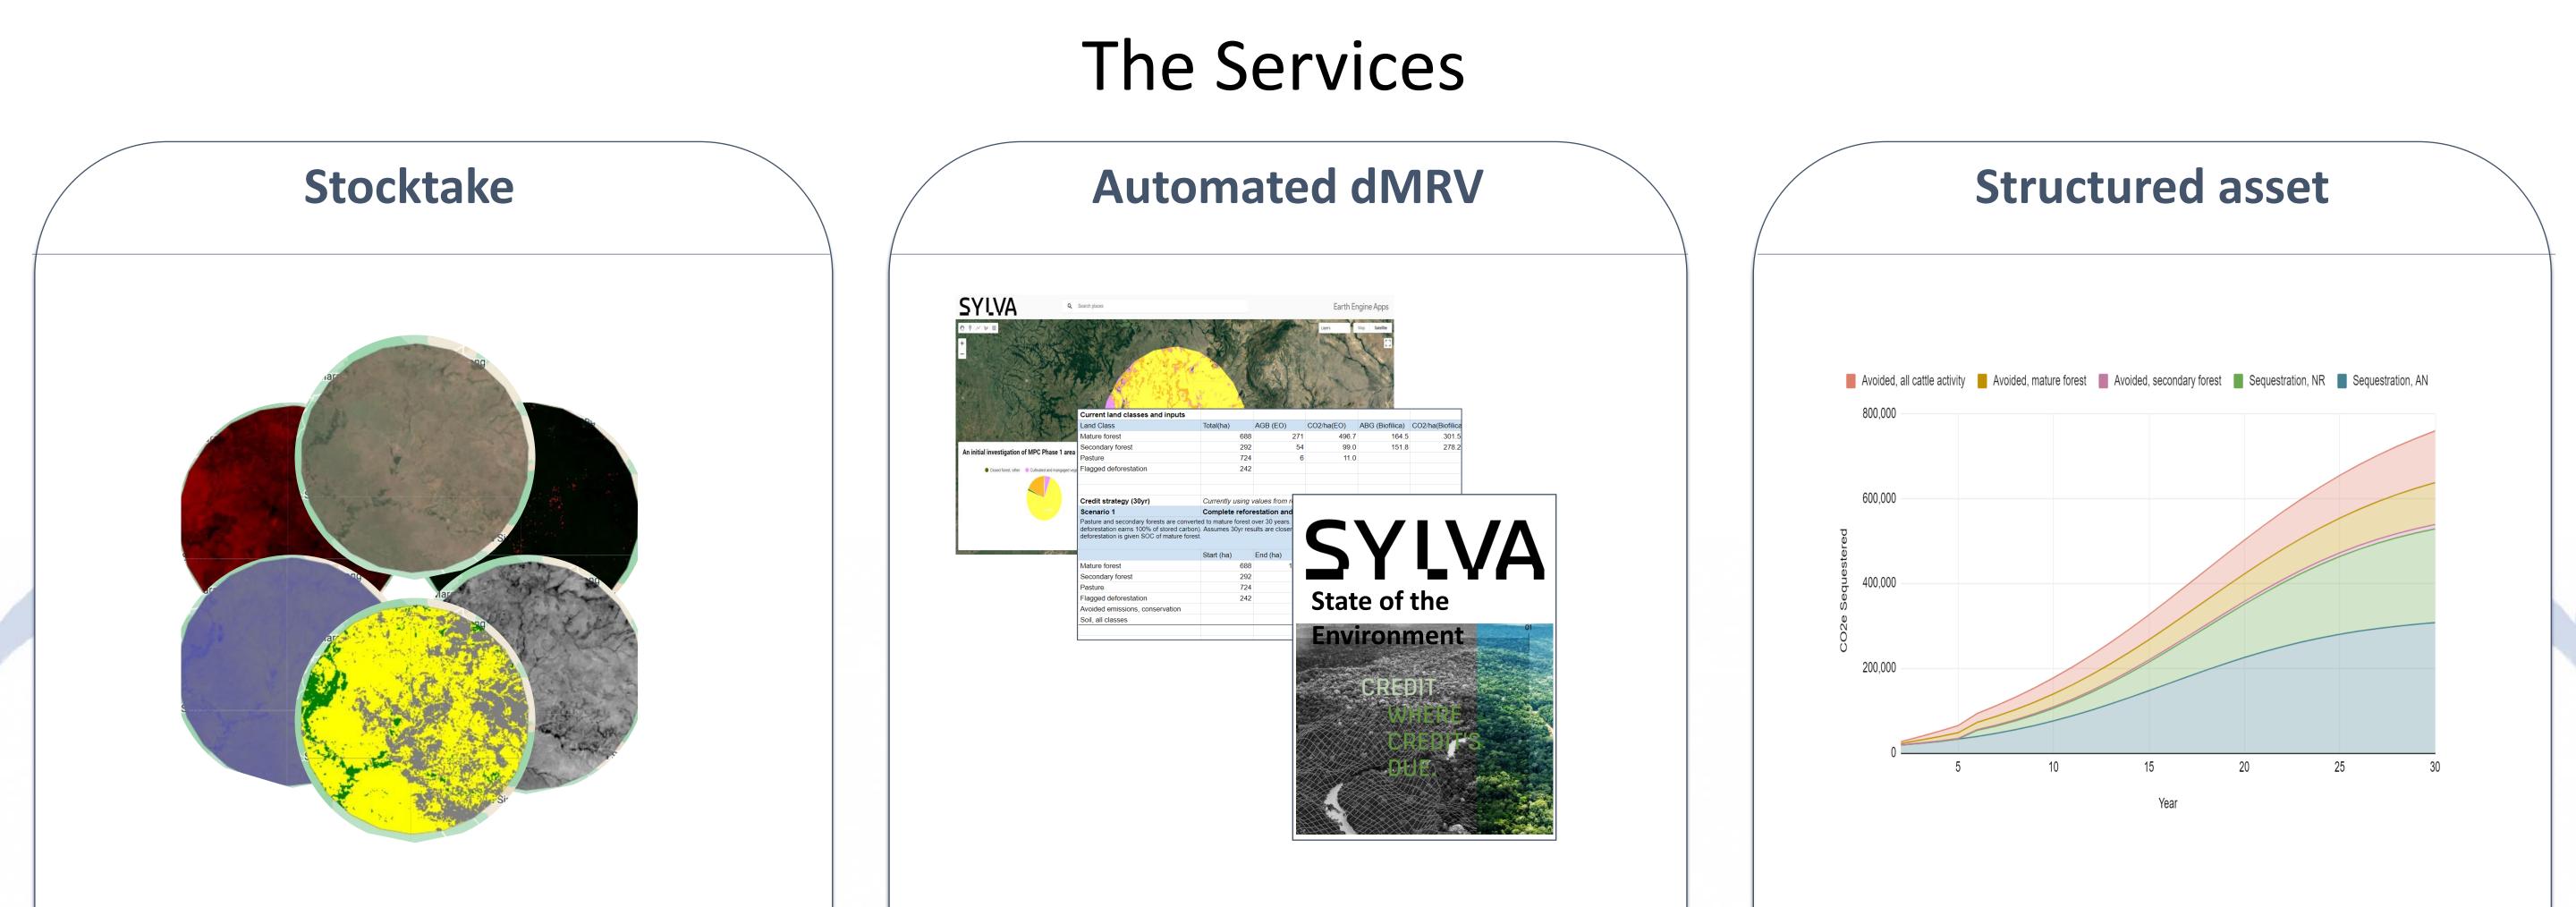

In situ processes established **Credits issued**

Credit purchased

Project Financing

Pre-issuance

Support locals

Earth observation provides a rapid overview of natural capital.

In situ data is collected for biodiversity. EO scales the results.

Accessible reporting and integrated

warning flags.

The project is transparent. All checks must be clear and reproducible.

Monitoring, reporting, and verification are built into the asset.

Investors treat projects like a green bond and diversify their portfolios.
